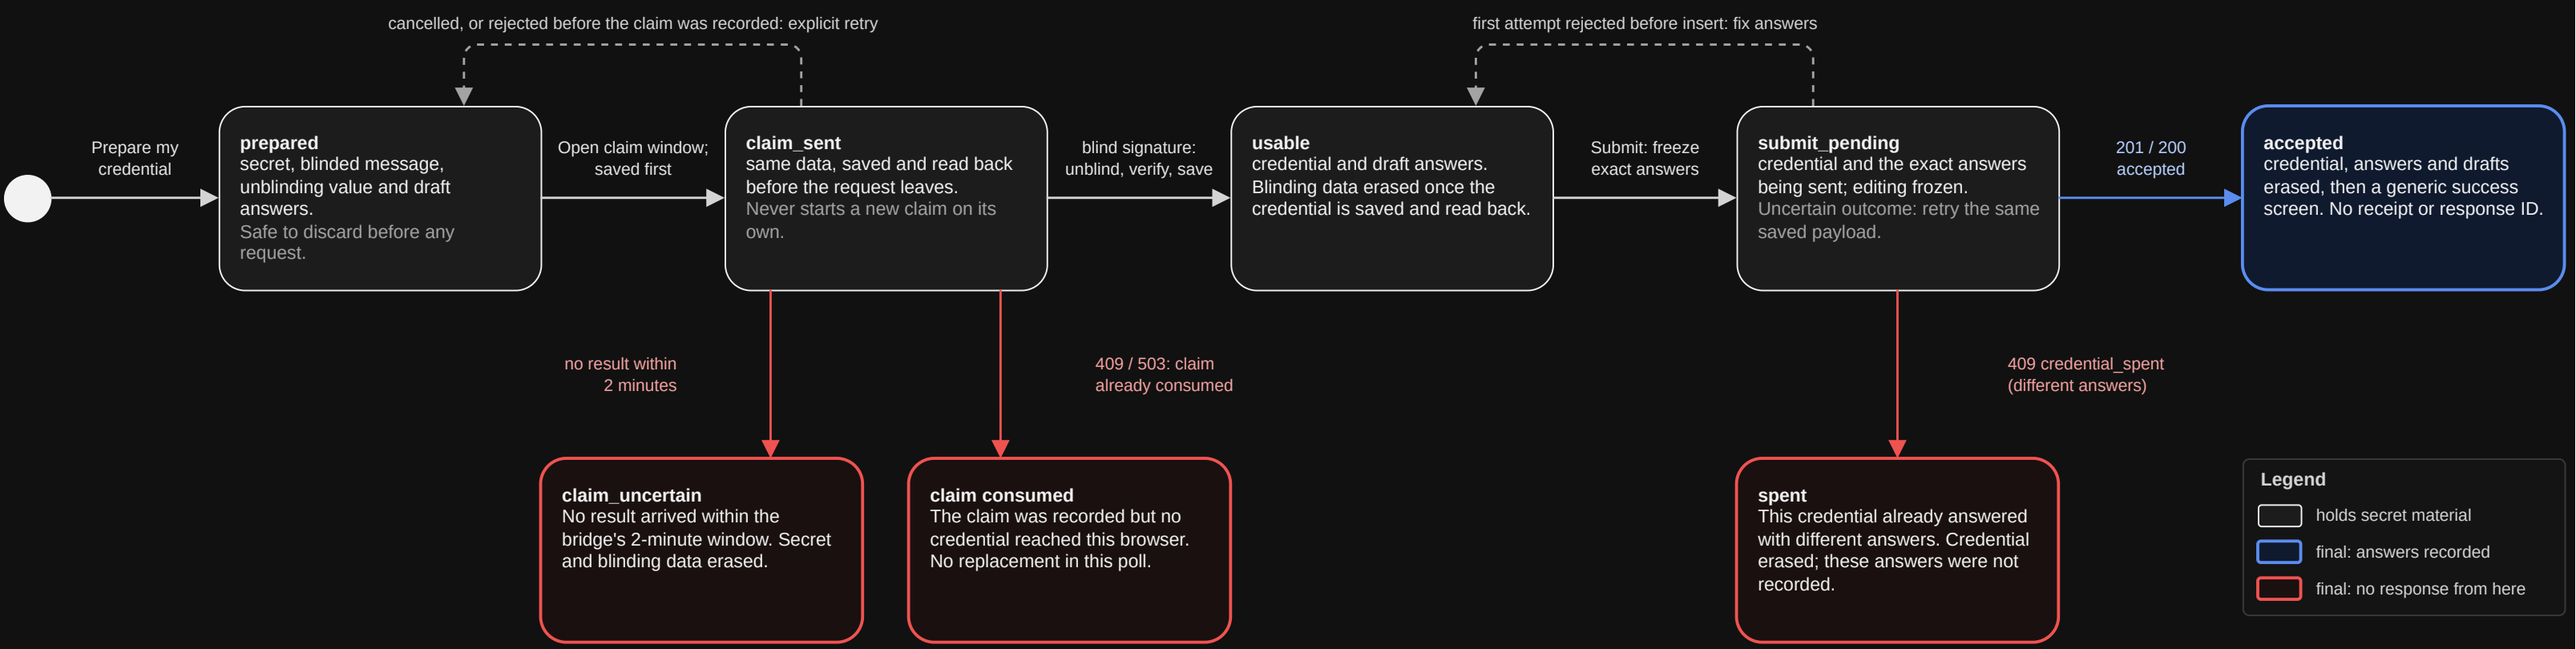
Browser credential states · one poll, one browser

Stored per poll in IndexedDB on the response origin and coordinated across tabs with a Web Lock. The server's uniqueness checks stay authoritative. Source: SPEC.md §8, §10.



Cleanup and safety rules

- If IndexedDB, Web Locks or the read-back fails, refuse to claim and explain why. Never overwrite another tab's prepared or usable credential.
- Observed closure, withdrawal, purge or expiry erases unused credentials. 410 poll_closed / poll_withdrawn ends any attempt and erases secret and pending state.
- submit_pending is kept for confirmation until 24 h after closing, then erased even if the outcome is unknown. Non-secret final markers expire 7 days after closing.
- An invalid credential (400) shows an explanatory failure screen; it never triggers a new signing request. Secrets never go in URLs, cookies, server storage or the clipboard.
